Reporting Tools
for Data Collection Systems

Overview

Once your Kanawha Scales & Systems data collection system has collected the data from various processes throughout your operation, you will want to have prompt access to this vast quantity of data and reduce it down to meaningful and timely reports. Kanawha Scales & Systems provides a set of powerful reporting tools to view the data the way you need it, in the formats you want. Our reporting tools provide you with the needed information in order to efficiently analyze and evaluate your business.

Data vs. Information

Your data collection system accumulates important data from your processes, but understanding it can be difficult. You do not want to spend countless hours sifting through realms of data to get the answers you need. In today's fast paced world, decision makers need to have accurate, straightforward, easy-to-understand information available instantly.

ReportViewer

Kanawha Scales & Systems **ReportViewer** reporting tool organizes your data into meaningful and easy-to-interpret information. The single greatest feature of **ReportViewer** is its intuitive user interface. With a single click of the mouse, users can run reports from a list of pre-defined report profiles. All functions of the report profile, such as printing, faxing, exporting, and emailing to recipients, are simultaneously executed.

Filtering Data

Reports can be filtered easily to drill down on the data you need to analyze. Need a report for a specific supplier or shipper? Simply add a new filter and select the appropriate data to report and you're done. If you wish, this new report profile can then be saved for future use by yourself or other users of the system.

> *"... ReportViewer organizes your data into meaningful and easy-to-interpret information."*

Report Grouping

Reports are grouped logically based upon your requirements. Create a set for each shift, or perhaps you would rather group production reports, vendor reports, and financial reports. Create a group for each user to simplify his or her daily tasks.

User Preferences

Preferences such as printer selection, number of copies, orientation (portrait/landscape), and other characteristics can be saved for each report profile. This allows reports, such as production reports, to be printed automatically in a landscape format on large paper, or financial reports, such as an invoice, to be printed on a printer with official company letterhead. Each user can customize reports tailored to their own needs.

Reporting Tools
for Data Collection Systems

Industry Standard Design

Report layouts are designed with industry standard software tools. Any Kanawha Scales & Systems standard report can be customized with the fonts, font sizes, spacing and layout to meet your preferences and needs. Formatting is point-and-click, so that 'what you see is what you get'. Once you have customized a layout, you can then apply that layout to other reports, giving your reports a personalized touch.

Exporting

Our **ReportViewer** software provides the ability to export any system report into industry standard formats such as Word, Excel, PDF, HTML and others. **ReportViewer** also exports data into standard computer formats, such as delimited and fixed length text files, or XML files that can be used to import into other business systems. In today's world, the ability to integrate with other systems is a critical requirement for businesses. **ReportViewer** provides the flexibility to handle all of your integration needs.

"In today's world, the ability to integrate with other systems is a critical requirement for businesses."

Information Transfer

As **ReportViewer** exports the data into the required format, this information needs to be transferred to those who need it most. Kanawha Scales & Systems' reporting tools provide the ability to transport these documents to end users via email, FTP, networked computer systems, and even fax machines. With **ReportViewer**, you will spend less time trying to get information to the right people, and more time making decisions based upon that information. Instead of walking into your next production meeting with a stack of papers that represents last week's data, walk into the meeting with your laptop or PDA and present real-time, meaningful, presentation-quality information.

Scheduling

ReportViewer can be configured to automatically send reports to any desired location at specified times, reducing system operators' daily tasks. These schedules typically include end of shift times, end of day, and other set times. By scheduling reports to run at critical production times, key personnel have the information that they need when they need it.

InfoViewer

Kanawha Scales & Systems **InfoViewer** reporting tool provides real time transactional data. By publishing this information to HTML pages, you can view the data through a standard web browser. As new data is accumulated, the HTML pages are updated to reflect these changes. Now managerial and executive staff can view critical data instantly, without the need to disrupt your production staff. Put information into the hands of your decision makers...***Make your data work for you!***
