OVERVIEW
Kanawha Scales & Systems presents ConveyorLogic, the Windows-based solution for displaying, reporting, and storing your conveyor scale data. The new ConveyorLogic system communicates with most popular conveyor scale manufacturer’s equipment. ConveyorLogic allows you to display the conveyor scale parameters in real-time via an intuitive user interface. Real-time data is captured to a SQL Server database for historical reporting purposes.

SOFTWARE FEATURES
The ConveyorLogic system is a full featured system that provides real time monitoring and trending of belt scale rates. This data can be easily stored for future retrieval and reporting purposes. The data is stored in a Microsoft SQL Server database and can be easily exported in a variety of popular formats including Comma Separated Values, Microsoft Excel, Microsoft Access or flat files. Our ReportViewer software provides the ability to export any system report into industry standard formats such as Word, Excel, PDF, HTML and others.

ConveyorLogic also has the capability to interact with your email system. This interaction will allow you to set up email notification for critical events such as high rate or load conditions, speed sensor faults, or even load cell failures. These events can be sent automatically as emails to key personnel.

SOFTWARE HIGHLIGHTS

- REAL-TIME DATA DISPLAY
- REMOTE RESET CAPABILITY
- HISTORICAL REPORTING
- REMOTE DISPLAY
- MULTIPLE SCALE INTERFACE

Runtime data, alarms, calibration events and other programmed events, as well as the remote display, can be viewed from ConveyorLogic.

ADVANCED FEATURES

In addition to email notifications, audit trails are maintained for all alarms and calibration adjustments. This allows supervisors to review the history and updates that have been made to the equipment for inspection audits. Each of these features are available for an unlimited number of scales, and with the Enterprise edition of the software, you can consolidate data from multiple ConveyorLogic systems into one convenient location. This location could be your home office or operations center. Since the data is housed in a SQL database, the data is easily mined for relevant information and is conducive for enterprise-wide data storage and reporting.

SYSTEM SUPPORT & SERVICE

Kanawha Scales & Systems offers a staff of experienced personnel with expertise in scale equipment, computer hardware, networking, and software. Our nationwide field support team is highly trained to provide on-site repairs and maintenance; in addition, we can support our customers on-line with remote access tools to address issues requiring immediate attention.

Kanawha Scales & Systems is recognized worldwide as the leader in a wide variety of weighing, batching, control and data collection systems. Known for our quality products and outstanding service and support, our ConveyorLogic product line will improve your operations and your bottom line.

Call us today to speak with one of our sales professionals about how ConveyorLogic can meet your conveyor system data collection needs.

“We are your bulk materials management solutions provider.”
