

WEIGHMASTER AG *for Data Collection Systems*

LEADING THE 'WEIGH' WITH INNOVATIVE SOLUTIONS AND TECHNOLOGY®

Your farming operation requires timely and accurate information on bulk products critical to your operations. Kanawha Scales & Systems has developed hardware and software solutions to meet these challenges. Kanawha Scales & Systems has become the industry leader by designing and manufacturing reliable data collection systems that quickly and easily gather the data vital to your daily operations.

SIMPLE OPERATION

Kanawha Scales & Systems' **WeighMaster AG** Data Collection System is designed to make weighing fast and easy. Our software is extremely intuitive, making the most common tasks easy. Typical operations can be performed almost entirely from a single screen, eliminating the need for an operator to constantly switch between screens to add a customer, truck, or product. This greatly increases the speed at which you can process loads across your scale.

CONFIGURABLE SYSTEM OPERATION

WeighMaster AG is flexible and configurable to provide a system that meets your individual needs. **WeighMaster AG** is tailored by customizing the data fields required for each transaction. The **WeighMaster AG** data-base and tickets are configured prior to installation by our team of technicians. Should enhancements be required, the core **WeighMaster AG** can grow with your operations. **WeighMaster AG** can be hosted on premise, in a private data center, or, with a reliable internet connection, in the Microsoft Azure® Cloud.

AUTOMATED OPERATIONS

Our automated system utilizes our broad line of scale-side hardware components, enhancing the functionality of **WeighMaster AG**. The automated system can reduce cycle times as well as transaction errors by identifying vehicles via barcode, proximity cards, and/or RFID tags.

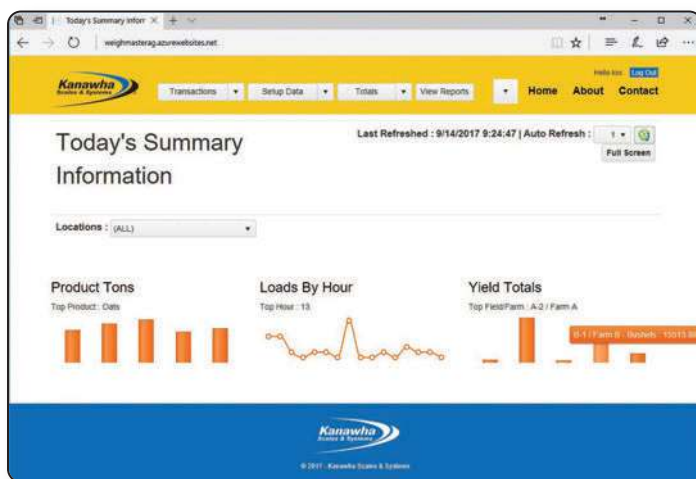

Self-service kiosks mounted at the scale enable the prompting of drivers to enter additional information without the need for them to exit the truck. Each entry is validated against the system database to guarantee its accuracy. At the completion of the weighing cycle, a printed ticket can be provided to the driver or it can be emailed directly from the system.

Traffic lights and photoeyes are also used with the **WeighMaster AG** Automated to help direct traffic flow and ensure that only one truck is on the scale while capturing weight data. A single **WeighMaster AG** Automated computer system can easily handle numerous scales located throughout your facility. Similarly, one scale and system can be used by multiple entities within your properties.

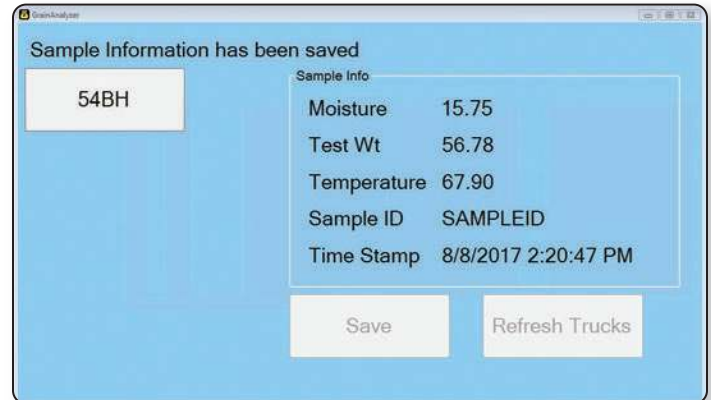

WEIGHMASTER AG *for Data Collection Systems***LEADING THE 'WEIGH' WITH INNOVATIVE SOLUTIONS AND TECHNOLOGY®****SOPHISTICATED REPORTING CAPABILITIES**

One of the key strengths of **WeighMaster AG**, setting it apart from other data collection systems on the market, is the ease and speed with which you can create and view system reports.

Our powerful reporting module provides the tools necessary to reduce the vast quantity of transactional data collected – down to only the data that is meaningful to you. With an unlimited number of reports, any report can be customized by changing grouping, sorting, time ranges, etc. Each customized report can then be preconfigured to run on demand or at specific times such as end of shift, end of day, etc. These reports can be generated in many standard formats and can be viewed from or exported to any computer, tablet, or smartphone.

**REAL TIME VIEWING OF DATA**

See the information you need, when you need it. View any data you've collected in real time with WeighMaster Web, which allows you to view transactional data as it occurs. Summary data of products, trucks, customers, or orders can be viewed on the WeighMaster Web screen using any industry standard web browser. The data can even be viewed by your managers anywhere in the world via tablet, smartphone, or a laptop with a reliable internet connection.

WeighMaster AG can integrate with your existing grain analyzer to associate this critical analytical information to truck weighing transactions providing a complete quality solution.

SYSTEMS SUPPORT AND SERVICE

Kanawha Scales & Systems offers a staff of experienced personnel with expertise in scale equipment, computer hardware, networking, and software. Our nationwide field support team is highly trained to provide on-site repairs and maintenance; in addition, we can support our customers online with remote access tools to address issues requiring immediate action.

Kanawha Scales & Systems is recognized worldwide as the leader in a wide variety of weighing, batching, control and data collection systems. Known for our quality products and outstanding service and support, our **WeighMaster AG** scale data collection product line will improve your operations and your bottom line.

Call us today to speak with one of our sales professionals about how **WeighMaster AG** can meet your needs!
